

## PHOENIX LECTURES GLOSSARY

ABBERRATION: a departure from rational thought or behavior From the Latin, aberrare, to wander from; Latin, ab, away, errare, to wander It means basically to err, to make mistakes, or more specifically to have fixed ideas which are not true. The word is also used in its scientific sense. It means departure from a straight line. If a line should go from A to B, then if it is "aberrated" it would go from A to some other point, to some other point, to some other point, to some other point, to some other point and finally arrive at B. Taken in its scientific sense, it would also mean the lack of straightness or to see crookedly as, in example, a man sees a horse but thinks he sees an elephant. Aberrated conduct would be wrong conduct, or conduct not supported by reason. When a person has engrams, these tend to deflect what would be his normal ability to perceive truth and bring about an aberrated view of situations which then would cause an aberrated reaction to them.

ABSTRUSE: hard to understand.

ADDER: a small venomous snake.

ADIOS: Spanish for good-bye.

ADJUDICATED: judged or decided,

AFFINITY: the attraction which exists between two human beings, or between a human being and another life organism or between a human being and MEST or theta.

AMPLITUDE: size; breadth; scope; abundance; wide range.

ANATEN: an abbreviation of analytical attenuation meaning diminution or weakening of the analytical awareness of an individual for a brief or extensive period of time. If

sufficiently great, it can result in unconsciousness. (It stems from the restimulation of an engram which contains pain and unconsciousness.)

ARC Straightwire: a recall process which gets the preclear to remember times of affinity, reality, communication and understanding.

ARC TRIANGLE: a symbol of the fact that affinity, reality and, the most important, communication act together as a whole entity and that one of them cannot be considered unless the other two are taken into account. Without affinity there is no reality or communication. Without reality or some agreement, affinity and communication are absent. Without communication there can be no affinity or reality. It is only necessary to improve one corner of this very valuable triangle in Scientology in order to improve the remaining two corners.

ARHAT: the level of a Buddhist monk who has attained Nirvana (the Buddhist concept of immortality).

AXIOMS: the Axioms are agreed upon considerations. They are the central considerations which have been agreed upon. They are considerations. A self-evident truth is the dictionary definition of an axiom. No definition could be further from the truth. In the first place, a truth cannot be self-evident because it is a static. So, therefore, there is no self-evidency in any truth. There is not a self-evident truth, never has been, never will be. However, there are self-evident agreements and that is what an axiom is. The Axioms of Dianetics and Scientology can be found in the book Scientology 0-8.

8-C OPENING PROCEDURE: Standard Operating Procedure 8-C. A system or series of processes developed in 1954. The goal is to return to the individual his knowledge, skill and knowingness, and to enhance his perception, his reaction time and serenity. Specifically, the use of these processes obtains, when correctly used, without further evaluation for or indoctrination of the

preclear, the knowledge that he is not a body, that he is a creative energy- production unit, and demonstrates to him his purposes and abilities.

It is a recording in the reactive mind of something which actually happened to an individual in the past and which contained pain and unconsciousness, both of which are recorded in the mental image picture called an engram. It must, by definition, have impact or injury as part of its content. A harmonic is, in mathematical terms, the even doubling, quadrupling etc., of numbers as they go up or the halving or quartering etc., of numbers as they go down. This last is not generally realized, that harmonics also go down. But here is an example of a harmonic: A pitch vibrating at, let us say, 200 vibrations a second will have a harmonic at 400, 800, 1600 and 3200 etc., vibrations a second. It can also have a harmonic of 100, 50, 25,  $12\frac{1}{2}$ ,  $6\frac{1}{4}$  etc. While these upper or lower harmonics are of far less intensity they are still there.

In England this process is called "Book and Bottle," probably because these two familiar objects are the most used in doing Opening Procedure by Duplication.
