**INT RUNDOWN CORRECTION LIST  
REVISED**

PC: \_\_\_\_\_ DATE: \_\_\_\_\_

PC GRADE: \_\_\_\_\_ AUDITOR: \_\_\_\_\_

The purpose of this list is to correct an unflat, overrun or otherwise messed up Int RD.

This list is used when:

- A) The subject of Int/Ext reads on a repair list and the Int RD has already been run.
- B) A bog occurs on the Int RD itself. An L3RG would first be used to detect any Dianetic errors.
- C) The pc is upset after the Int RD or the End of Endless Int Repair RD, has head somatics, high or low TA, or is not VGIs on the subject of going into things.

**NOTE 1:** Per HCOB 12 Sep 78, URGENT. IMPORTANT, DIANETICS FORBIDDEN ON CLEARS AND OTs, Dianetic Clears, Clears and OTs are not to be audited on the Int RD as it uses Dianetics. They may be given the End of Endless Int Repair RD as it is a Recall Process.

The following list may be assessed on Dianetic Clears, Clears and OTs, however, as: 1) it also applies to the End of Endless Int Repair RD and 2) the pc may have been run on the Int RD before the above HCOB was issued.

If a Dianetic Clear, Clear or OT reads on any question which calls for a Dianetic handling (Ex: Questions 2, 3, 4, 7, 9, 29) the Dianetic handling is not done. Do NOT engage in any activity that brings about further engram running.

The correct action, if you get a read on one of the above questions, is to *indicate* it and let the pc tell you about it if he wishes, to bring it to an F/N.

Where the handling calls for an L3RG, an L3RG could be assessed, but you must not do more than *indicate* the reading questions. You must *not* engage in engram running.

Otherwise, the handlings given on the Int RD Correction List may be done on Clears and OTs. A Clear or OT who then has any further unresolving Int trouble would be referred to an AO for handling.

**NOTE 2:** If the pc has had only the End of Endless Int Repair RD do not assess those questions marked with an asterisk (\*) (Questions 2, 3, 4, 29) or do any repair action that calls for Dianetics.

---

Assess this list Method 3.

Take up each item that reads and get the reading item fully repaired to F/N. Suppress and False can be used as needed to take a question to F/N. Handle each read to F/N. Do not go on to another question leaving one that has not F/Ned.

If at any time while doing the list the pc has a big win with F/N, VGIs, acknowledge, indicate the F/N and end off. Do not take the list beyond a major win for the pc.

R-FACTOR: We are going to do an assessment concerning the subject of interiorization. (If pc does not understand this R-Factor clear up what the Int RD or the End of Endless Int Repair RD was as he may not have recognized it.)

### 1. On your INT handling is a recall flow unflat? \_\_\_\_\_

Assess the following, using the Int button the pc has been run on.

Is recall a time when you (Int button) unflat?

Is recall a time when you caused another (Int button) unflat?

Is recall a time when others caused others (Int button) unflat?

Is recall a time when you caused yourself (Int button) unflat? (Assess on Quad pcs only.)

For Int RD: Flatten the unflat flow(s) to F/N, cog, VGIs. – For End of Endless Int Repair RD: Pick up the unflat flow and handle to four F/Ning flows on that Int button. Then reassess the Int buttons, as the entire RD may not have been flattened and will now need to be.

### \*2. On your INT RD was a chain or incident left unflat? \_\_\_\_\_

Find out which one(s). Handle with an L3RG.

### \*3. (NOTE: ASSESS No. 3 ONLY ON PCs WHO'VE HAD THE ORIGINAL INT RD, NOT THE REVISED INT RD.) \_\_\_\_\_

Is a secondary flow unflat?

L3RG and handle.

### \*4. Is an engram flow unflat? \_\_\_\_\_

L3RG and handle.

### 5. Was some part of your INT handling misrun? \_\_\_\_\_

Find out what. – For Int RD: handle with an L3RG any messed up chains. – For End of Endless Int Repair RD: straighten out any messed up recall flows and handle per No. 1 above.

### 6. Did you run the concept of "being in" or "being stuck in" instead of the concept of "going in?" \_\_\_\_\_

Sort it out. Find out what was run. Handle any confusions. If it is established that he didn't run the concept of "going in" on *whatever* the running button was, check the button for read. If it reads, run the Int RD or End of Endless Int Repair RD properly. Do not run the RD if the button doesn't read.

### 7. Were you running an item that was different than the one assessed? \_\_\_\_\_

Indicate it. Get the item the pc was actually running and take it to full EP if not yet flat. Then recheck the item that was assessed, put in Suppress and Inval as necessary, and if charged run the item that was assessed (on whichever RD the pc had).

### 8. Did the INT button assessed have no charge on it? \_\_\_\_\_

Indicate the button was uncharged and should not have been run and all actions connected with it should not have been run. D/L if necessary.

9. Was there another INT button that should have read? \_\_\_\_\_  
Get what it was and note its read as the pc gives it. Find out if the Int button that was taken up instead is charged. If so, complete any handling on it to F/N. If not, handle as in No. 8 above. Then handle the new item, if charged, on Int RD or End of Endless Int Repair RD, whichever applies.
10. On your INT handling were you run on a recall flow that had no charge on it? \_\_\_\_\_  
Find out which one and indicate that that flow should not have been run.
11. Can't you get in? \_\_\_\_\_
