C/S Series 2

PROGRAMMING OF CASES

“Give pc Scn Triples then do his Dianetics then fix up his hidden standard,” would be a series of crazy non-sequitur C/Ses. Nothing is connected to or proceeds from anything. That would be a dispersed program for sure.

It actually happens horribly enough. Study a Class Chart and then look through some old folders. At once, the sequence of processes ordered sounds like “The submarine just went by so order a hundred tons of bread.”

Such C/Sing has no cause and effect in it. A person totally ignorant of basic cause and effect gets “Pc nattery. Run Dianetics.” “Pc’s case not advancing. Do Grade 0.”

The cause of the pc condition is not understood. A nattery pc has withholds. A case not advancing has problems. That’s real actual basic tech (see Auditor’s Rights HCO B for the table). This data is over 15 years old at this writing, is part of proper Academy courses and the SHSBC and is even in Class VIII materials. The reasons for the pc’s behavior or trouble are not mysterious reasons never revealed. They are all very well given in course materials.

Jumping processes on the Class Chart set the pc up to fall on his head later. An “OT VI with problems” is really just an unflat Grade I. And until Grade I is flattened to permanent Ability Attained on the Class Chart, he remains an unflat Grade I.

Let us say the pc is trying to make it on R6EW Solo Study but keeps having *Problems* with it and can’t get on with it.

The uninformed C/S orders a Student Rescue Intensive. This is all right as far as it goes. But a more searching look into the records is likely to find that this pc had exactly 10 minutes on the whole of Grade I!

The Out-Program is far more likely to play havoc with this pc than just problems.

He is possibly in doubt as to case gains and his reality is poor and yet he is being exposed to the highly restimulative materials of an upper level to which he has never climbed.

A direct effort now to put in problems Grade I also puts an auditor at risk. Instead of merely being able to run problems as he would have been able to earlier, the pc is in some sort of overwhelm and is nervous or scared or believes *he is* at fault some way. He will look everywhere but in the right direction.

The answer to an incorrectly programmed case is, of course, a repair program and the sooner the better.

Such repair programs must be very light. Prepared lists to find charge, 2 way comm on various subjects, take a walk. And such a repair program **MUST NOT**

- (a) Let the pc dive into rough heavy charge, or
- (b) Be overdone to total boredom.
