CRASHING MUs, BLOCKS TO FINDING THEM

A service facsimile is an idea someone uses to make himself right and others wrong. These ideas are held in by engrams. For the purposes of Crashing MU finding, they can be handled by recall.

If you are trying to find someone's Crashing MU and he has a service facsimile getting in the way, then his efforts will be taken up entirely with trying to make himself right and you and others wrong and you will not be able to get to the Crashing MU. He would even feel made wrong if a Crashing MU was found.

One person who was being checked for a Crashing MU in an area in which she was goofing could not even see her goofs, let alone a Crashing MU. Eventually she admitted that she had the idea that she could not be wrong regarding this particular subject. When this was spotted and cleared up the Crashing MU could be located and the whole area straightened out.

HANDLING: If the person is manifesting the symptoms of a service facsimile or if the failure to find a Crashing MU where one obviously must exist is not resolved with A-D above, then the Word Clearer would ask, "Is there some idea you are using which makes you right and others wrong?" and two-way comm with him about it without getting into listing for an item. Usually the person will give up the service facsimile and realize that he has been making himself right and others wrong. He will feel very relieved to have spotted it and will be able to look for and find his Crashing MU. If, however, the service facsimile does not come up on request and two-way comm, then the person should be sent for handling by an auditor on service facsimiles.

CAUTIONS

The remedies given in this HCOB must be understood to be remedies for inability to locate the Crashing MU—they are not substitutes for standard application of the tech of finding and clearing Crashing MUs.

One would always begin with the standard approach to finding the Crashing MU and, if none was found, only then would one check for and handle each of the blocks given above in the sequence given.

If one found something on any of A-E above, one would handle it and then check again for the Crashing MU. One does not automatically check all of A-E. The sole idea is to handle whatever is burying the Crashing MU and as soon as that has been achieved one returns to Crashing MU finding.

If half way through the False Data Stripping, for example, the person realizes he has had a Crashing MU on, then that's it. You wouldn't now continue the False Data Stripping. You would complete the step you were on and then end off.

The same goes for any of the remedies. As soon as the Crashing MU is found or findable, the purpose of the remedy has been achieved and that would be it.

As it is fatal to miss a withhold on someone, it is very important that any withhold pulling done is thorough and goes to real VGIs whether it is metered or unmetered.

Withhold pulling off the meter must be followed by a meter check, whether anything is found or not.

Similarly in asking for a service facsimile it is possible to start the person listing and if he gets sick or caves in later one must assume that this has occurred and get the action repaired in session rapidly.

NOTE: Of course if the person is PTS and dramatizing creating problems, you may not be able to get anywhere at all until he has been run on Clay Table de-PTSing to full EP.

These cautions are not given here to make it look difficult or dangerous to do Crashing MU finding. It is usually very straightforward. However, if one is going to get results every time, he must be aware of the possible errors or barriers that he may run into and should know how to handle them.
