NED for OTs Series 14
C O N F I D E N T I A L
OUT-INT, "WENT IN", "WENT ON"

If a Pre-OT can put his attention on a BT and blow it off, without even working too hard at it, BTs, with their attention must be sort of blindly in-drawn.

"Went in" and "Went on" are two different characteristics of Int. Some think they can't go in - because they think they can't go through solids - so they "Went on", plastered on (to something).

Another way to blow them is to scan them back to when they went in - and they blow out. Like a plus/minus reaction, "Went in" - blow out.

A BT with Out-Int affects its ability to blow - not the Pre-OT's ability to blow them off - the BT's ability to blow. You scan them down a chain of "Went ins" to the first "Went in" and it will blow.

You could handle a very difficult one by recalling "times they went in" - for very difficult ones. A fast way to blow them would be to get them to scan back through "Went ins" - "When did you go in?" - and they blow.

"ON-NESS"

There's also "Went on", "Went onto something", and a lot are stuck on something. You scan them back through times when they "Went on". They went onto something and couldn't get off.

Sometimes a BT will blow from inside the body and catch on the outside of the body, or within 2 - 3 feet of the body. You can get too many restimulated on the surface of the body. You have to blow off there surface ones.

Being stuck on the surface of something would have something to do with the button "Can't go in" for a BT, and that button produces blows. BTs who "can't go in" to something, "Went on", and stuck.

"On-ness" is different from Out-Int. They are stuck on, not in.

"On-ness" is handled in the same way as Out-Int but with "Went on" or "Got on" . The "earlier than" phenomenon applies to "ON", as one has to first get on something before he gets off. Trying to persuade a stuck "Went on" BT or mass to get off, can run into the same phenomenon as Out-Int and he won't blow. Handle it the same way as "Went in" but with the difference "Went on". One could in theory find a thetan who was "stuck on", handle that and then find that the same being had Out-Int.

OUT-INT

Sometimes BTs have Out-Int because they can't get out or couldn't get out. They are in the valence of something that can't be out, even fatal to be out, e.g. "the inside of body" or an internal organ. They consider these safe beingnesses, and it's safe to be in. So you ask "What couldn't get out?" and they blow.

If you ask them to point which way is in, they can't. Getting them to point which way was in works, and produces blows. Use the past tense, "Which way was in?" and they will blow.

RECURRING INT TROUBLE

If a Pre-OT on NED for OTs has recurring Int trouble or continues to run into Out-Int, and you can't solve it easily, do the End of Endless Int Repair Rundown (assessing and handling Int buttons by Recall , not R3RA). This Recall technique will run and solve any Int troubles.
