NED for OTs Series 21

CONFIDENTIAL

REVIVIFICATION

During NED for OTs research I discovered that beings do not just reviv in time. They also reviv in location. You can have a guy totally reviv'd in time, he's stuck down the track in an incident which is PT for him. Anything which he views, is viewed from this point in time. It is when he is.

A being can also be in a reviv in place or location. That is where he is. Everything he views is viewed from that location, that viewpoint in space. They're „battered all over the universe”. A BT can think of himself as up there, looking down at himself. A total wrong viewpoint. He's in a reviv and everything he does is from a stuck viewpoint, so he's operating with a stuck spacial point of view. Say the guy is reviv'd in Flanders, everything he does is from the viewpoint in Flanders – even tries to look at himself (now) from Flanders. He's operating in PT from some place down the track.

THOUGHT DISASSOCIATION

Thought disassociation follows a point of view pattern. In a reviv, they're talking to you from an altered point of view, so you get disassociated thought. Say he's in a reviv of location, in a radar station in space. You ask him „Where are the books?” – he looks at a radar screen and says, „They're going away”.

I know a case who had an accident. She thought she left the body and went to a between lives implant and returned to the body. But there has been no between lives implant in that place for eons! What happened is, she was reviv'd in a between lives implant. She had the accident and went exterior, she thought she went to this between lives implant because that's the location she was reviv'd in.

This is a matter of old fixed viewpoints in spacial locations. You can often cure a case with the process „Where would you be safe?” He might go through a heavy reviv on the process and he might „do a bunk” – going back to his last point of view, location-wise. That point of view is still out there. That's why D/L works. You blow that point on Locate step. It's when and where they are, as they're not in PT.

That is where he is „safe”, that's Thought Disassociation, and that's small pictures – because he's in a picture, looking at a picture.

These are the mechanics of the Bright Think Rundown (Disassociation process) which can be run on anybody. Running it is not part of NED for OTs as it is a separate RD.

OBJECTIVE DUB-IN

This is a different phenomenon from Thought Disassociation and spacial reviv.

He looks at that wall, and because it's not safe to look at the wall, he makes a picture of the wall and brings the picture back to him and looks at the picture of the wall. He's so far south he can't confront anything that's in front of him. You tell him to look at the window, he sort of reaches out to the window with a beam or something, makes a picture of it, and pulls the picture back up to him, looks at it and tells you the window has bars on it. This case requires objectives until it's safe to look at something and perceive it.
