ANATEN

When a dormant BT wakes up it acquires mass. He's „not there”, and then when attention is put on him he acquires mass. He's in some artificial valence (which produces mass). When some recognition is granted him, he goes in valence and blows. There's a ridge when a theta feels under attack, or maybe unacked – first reaction is to stop, so he mocks up mass.

A BT sitting around or on a nerve channel, who is awakened and suddenly mocks up mass or a ridge, will shut down the nerve and knock the guy anaten – knocks the body anaten – not the pc. In the head especially, when a cluster suddenly mocks up mass, it shuts off nerve channels.

Some people who are deaf or blind might simply have a cluster sitting on a nerve, and it's gone on so many years the nerve atrophies. Catatonics may be suffering from this sort of knockout. This explains why a tactile process works – you run tactile on the bed, etc., after an accident and the guy comes out of it.

Another source of anaten is a being exuding anaten – he can be a piece of anaten – and he also exudes anaten, and beings around him go anaten. It is a feeling – an unconsciousness feeling.

Cluster A going into anaten, then influences cluster B, and then cluster B comes up tone into unconsciousness, and you get anaten. These clusters exist as solidities way below unconsciousness, and on III don't respond at all. Both phenomena above produce anaten.

„SOMETHING THAT ISN'T THERE”

It's also possible to run into a BT thinking he is „negative mass” and cutting off perception or sensation in an area.

Occasionally you may run into some BTs hanging together in a mocked up vacuum.

Some BTs have a „something that isn't there”. They were withdrawing from something, but there was nothing there. It's either suppressed out of existence or it happened once and they stuck in the pattern of withdrawing; they can even justify and think there's something they're withdrawing from. They put something there to withdraw from – a negative mock-up. Or they think another BT is putting something there, that isn't there.

SOMATICS

Sometimes they blow and a somatic turns on – two beings crunched together and at the point of „crunch”, they get a somatic.

It takes a multiple mass to create a somatic. Whether it's a number of BTs or clusters, the somatic mechanism is mass versus mass, not cluster versus body, but cluster vs. cluster, or BT vs. BT, or BTs and clusters vs. BTs and clusters, or cluster vs. cluster with a BT squashed in the middle. The cluster vs. cluster somatic is more severe than a somatic in a picture (incident) – unless he were totally revivified in the incident. You can also postulate a somatic, but that's different.
