NED for OTs Series 11

C O N F I D E N T I A L

THE FIRST STEP OF NED FOR OTs

The first step of NED for OTs consists of repairing past mis-auditing. You check "Past auditing" first, and if it's not reading, no pc interest, you skip it. But if later in the Rundown you run into a bog, TA goes high, or any kind of grind or mess up, you recheck past auditing, and handle. Repair of engram running is limited to simply indication. You mustn't get into continuing to run the engram or you'll be running engrams on a Clear, as you aren't running them on a Clear and aren't repairing them on a Clear, you are repairing them on a BT.

THE BUG ON NED FOR OTs

If you get a wrong item on somebody they will now have that item - it persists; e.g. you run "sore toe" on somebody who doesn't have one, they'll end up with a sore toe! If you now try to handle sore toe with auditing it will worsen. Because it was a wrong item in the first place. You have to repair the wrong item. A BT could be run on a non-existent somatic, and to be obliging mocked it up. They can get run on imaginary incidents and on things that are not their track so what was run could have been false.

If the pc was run on an unreading item, BTs will be activated, but they don't have that item either. It's a false assumption there was something there to run - that's their misconception foisted off on them by being given the belief that the item existed or read. When called on to run something, they will furnish copies, misowned and manufactured items. You need to check for BTs run on wrong items, unreading items and sort it out.

Some BTs went exterior and were audited past it. Some BTs had already gone Clear - not just on the Clearing Course - some went Clear on Objectives. So you don't just have Dianetic auditing on somebody after Clear. You also have Dianetic auditing on BTs after they went Clear! Resulting in invalidation of the State of Clear, the mistake of misowning others' pictures, and then misidentification of identity. NED auditing after Clear applies to BTs as well as Pre-OTs. So there are residual BTs with invalidated erasure, invalidated Clearing. And the originally overrun thetan may have blown and left copies of the overrun.

Grinding an incident on Dianetics or NED will result in some BTs run past erasure, so they have to mock it up again to run. Or they never got to basic and erasure because the auditor never asked for E/Beg or E/Sim, and were left hanging incomplete on the chain. And other BTs will

copy all this obsessively.

Out L & N lists and wrong items will do the same thing, and also can be repaired.

Auditor command flubs, lack of acknowledgement, couldn't hear the auditor, session distractions - all these will hang up BTs. Even false dates could be copied - they can be twice removed from reality. In trying to date something now you could wind up dating the wrong date, or dating the date that the wrong date was given. And it might not have been that BT's or cluster's incident that was being dated in the first place - the incident may have been misowned - not their incident.

YOU CAN'T RUN NED FOR OTs ON SOMEBODY WHO HAS BEEN RUN ON WRONG OR UNREADING ITEMS WITHOUT REPAIRING THEM.

Also beware of getting into over-correction, because what you are correcting on one BT, can start uncorrecting on another BT.

So you check "past auditing" for read and interest as the first step. If it reads and Pre-OT is interested you handle it. If not, skip it, but be alert and if Pre-OT hits a bog you recheck past auditing. Remember not to run anything, just indicate it.

This doesn't mean that all previous auditing was bad - far from it! But some auditors due to poor training, bad metering, or nasty habits will be found to have messed up cases. So you repair past auditing by auditors - by auditor's name. (And also see that such auditors are handled too.)

That's the bug on NED for OTs - you can collide with BTs and Clusters messed up in past auditing, and this can recoil heavily and physically upset the Pre-OT. So you keep the Repair List handy and if you run into a bog, use the Repair List and next session C/S to take up past auditing, remembering not to continue to run engrams but only indicate.

REPAIRING PAST AUDITING BY AUDITOR'S NAME

Make a list of names of auditors and test these for read. Include self-auditing and solo auditing too. Those that read, you repair the items run by that auditor, or in self-auditing. And make provision for occluded auditing. You may think you've got it all, only to find an occluded session or sessions spring to view later.

This is why you must teach FESers to FES and make up FFTs, that include the auditor's name.

And that's why the Advanced Courses Specialist auditor must know what he's doing in training to deliver this Rundown. It's not a piece of cake.

Do it flawlessly and produce the spectacular results the Rundown is capable of.
