CHRONIC SOMATICS, MISSED BTs

If a chronic somatic doesn't resolve there are missed BTs and clusters causing it. There are several ways in which BTs and clusters can be missed or overlooked. First of all is by the Pre-OT thinking that the mass he perceives is the body when it actually is the mass of BTs and clusters.

Next there is the BT or cluster producing a somatic in another part of the body, or influencing another part of the body. Have the Pre-OT trace back from the picture or somatic to the BT or cluster. The Pre-OT can do this even though the BTs and clusters are generally confused about whose picture is whose. As the Pre-OT looks for where the BT or cluster is the meter will read and the auditor can steer the Pre-OT and help him find the position in the body of that BT or cluster.

Some BTs and clusters are hiding, secretive, being invisible, hidden or withdrawn. Ask the Pre-OT to look for BTs and clusters in each of these categories and blow them. Be sure to complete handling one category before taking up another category or you'll get over-restimulation and a beef up.

Then there is the BT or cluster holding other BTs and clusters in or one BT or cluster holding other BTs or clusters compressed or suppressed. Handle the BT or cluster doing this first, then the others will blow off easily. When a very small mass is activated it will increase in size before blowing – there can be a thousand or two BTs in such a mass and sometimes these explode apart as they blow. Although the mass becomes very heavy when it is activated, it's not a big BT, it's a lot of little BTs, under suppression.

You can run into a cluster causing damage to the body, and after blowing this cluster, you then look for and handle other BTs and clusters who were copying it, or stuck in pictures of the damaged area and held in it or holding onto it.

There are BTs and clusters who are refusing to make pictures, as well as BTs and clusters obsessively making pictures. These need to be looked for and handled.

Some BTs and clusters are being inert masses and don't seem to respond until put into communication and could be missed unless the Pre-OT were asked to look for BTs and clusters being inert masses; BTs and clusters being dead or who think they are dead; being MEST; being molecules.

The Pre-OT may think he/she has an aura. An aura actually is a collection of BTs and clusters mocking up the aura – and sticking in it – as it is a highly electronic mock up. It is being mocked up by BTs and clusters and has BTs and clusters sticking in it. You may encounter something like a whole person – body and BTs and clusters that were suppressed down to

nothing – you contact it as a very small mass and it increases in size to a whole body and aura, complete with BTs and clusters mocking it up and sticking in it. But that's what an aura is – a collection of BTs and clusters and that's all it is.

Very small dense masses. These when activated can increase to huge size and mass knocking the Pre-OT anaten, sometimes for quite a long period of time. As the anaten comes off, the mass will start to disintegrate. The anaten is the “glue” that holds them together and when the anaten runs out, the BTs and clusters will blow off easily.

The Pre-OT can work on cleaning out a body part or area of BTs and clusters and get the area looking clean. Then you have the Pre-OT look inside or behind or on the other side of bones or organs or ridges in the area to find BTs and clusters. Unless you have the Pre-OT look inside or behind or on the other side, these would be missed or overlooked. In one instance a somatic didn't start to resolve until this action was done.

BTs and clusters can be conditions (as different from being a terminal) – conditions that they associate with the body – whatever the body can do, e.g. a being who was being “unconscious”. So have the Pre-OT look for BTs or clusters being body conditions.

A BT or cluster can believe that he is his own picture – or somebody else's picture for that matter. A picture that is hard to blow is probably composed of BTs and clusters being the objects in the picture, e.g. a picture of a field with a tree and a cow in it. The tree is a being being a tree, there's a being being a cow and a being being a field. Together these beings compose the picture. Or you could have one being being a pole trap and another theta who came along and stuck to the pole trap. So if a picture is hard to blow, check for BTs and clusters being the objects of which the picture is composed. And when you have blown the original beings also blow off any who stuck to it.

Phrases such as “a man of my kidney”, “got no spine”, “got to have spine”, “no stomach for it”, confuse BTs and clusters in those body parts and play a role in pinning them in. You may run into such phrases or clichés when asking the What? Who? questions. Just acknowledge and repeat the What? Who? question.

Probably the root of sickness or psychosomatics is in negative beingnesses. BTs and clusters being the negative of a body part, such as “a no hand” or “a no stomach”, “a no body”, etc. When you ask the What? Who? questions you'll run into answers such as “no hand”, then it will flip to the positive “hand”, before blowing. These negatives come about from intentions to obliterate – so they become a “no ____”. They tend to act as a negative terminal to a positive terminal and thus keep things pinned down. After you've cleaned up a somatic area of all BTs and clusters in it and being it and hidden “behind”, have the Pre-OT look for these negative beingnesses.

Some chronic somatics depart very fast and don't return. These are almost miracle in nature. Other chronic somatics gradually lessen and can disappear in the course of the whole Rundown. So don't despair if you don't get an instant alleviation of the chronic somatic but just keep on with the Rundown and don't specialize in chronic somatics. Also be very cheered up when you hit an instant disappearance of one. Both conditions can exist in the same Pre-OT on different chronic somatics.
