## Super Static RD

12 June 1986

Doingness / Communication / Control is the way in and out of the Super Game.

But there are two Vectors of it.

A) Important (Relatively).

B) Unimportant (Relatively).

A) Leads toward Static states and is an upward vector.

B) Leads toward Minus Static states and is a downward vector.

These two eventually descend or ascend thru the various confusions and stable data levels to produce all the conditions and plus-minus combinations of the lower levels.
