

OT 17

Super Static R/D

12 June 1986

Since OT 17-33 can be run by TP link and any where and any when, these levels do not need "formal" (positive via U3) session reports or metering. They are action levels for the Operating Static. The Operating Static is the improved Quality of Operating θ n — \textcircled{S} (It's not yin and yang - it is the Operating Static Symbol).

Thus in the S \textcircled{S} RD, the Auditing Dependency should be 2WC to FTA as the last step.

The Auditing Space and Time of S \textcircled{S} is all ∞ 's and covers the Ring Archives and

Static Levels and KRCP, ARCU, all A, ζ , P MOCOs and θ ns Improving or Disproving and the Reads and Metering are by Knowingness, Perception, Postulation, and Doingness in the ∞ 's and the Record or Report is the New Improved Conditions, Existence, and Source Vectors.
