- Source Mission's 1st Message = me
- Part of ["]Compromise["] of the EVP was to take 2nd, 3rd, 4th, messages.
- 2nd was a Comparator Clone
- 3rd was a Cursor Clone
- 4th was a Copy Clone

The "Copy Clone" just kept the Man-Record.

The "Cursor" served as a Hyper Core data source of "what happened that the mission is trying to correct."

The "Comparator" kept the analysis going between the two and fed it to me.

They are like a Source - Eth - Tech - Admin team.

They run out on MOC or free and "Thank you for a job well done" or "Thanks for your help in the mission" Each could have created sub-mocos for data storage, etc.

Its a higher "mission" or "Source Mission" harmonic of the Prime MOCs

(Cursor Clones can get data from ~~BST's~~ "Cones" of LTA happenings since this record is "frozen" in the GCM O Mest-V. and there are plenty of them.)

One can do his mission alone after all case and levels up to 302 are done. Before that, they helped keep him on purpose.

The "briefings" could have taken place very recently TTA, even 1936-1939 for the Contingency Plans. This means one could have gotten to 302 at end of LTA ^{and} stayed on top of the games till recently.

The Fun, Wins, and Acceptances expected from doing the Bourse Mission are what the OT (me) expects from doing his mission well. It is not necessarily part of the Mission. It can be Personal or Private. DRS/CLS
Rend.
