Source Basics

Game of Games - Operations -

As part of Mission Operation I have a constant analytical check-line on LTA Parallel Time. Its my record-debrief of ops. missions LTA. Some were told of earlier on Games Basics Course, but those were Hyper-Corp records. This is a Source Ops debrief and is Analytical rather than Experiential.

Example: 1987 - 12 Nov LTA

I was in New York. I had come on an ops mission, taken the body of a drug-addict, rather pretty, girl who had ODed and left the body. Fixed it up and made contact with a N.Y. Stockbroker, who did jogging in early mornings - that's how I met him - got a 2D with him going and lived in his apartment. During day, while he was

at work, I gleaned info from Newspapers, Business and Political Mags, and TV. (Patrol ships could receive the Radio & TV reports, but, as usual, that's just the icing on the scenario cake.) Then when my 2D came home, I would be lovely and enchanting and ask questions I had "thought of" from the reading. His inside knowledge gave the full picture I needed

to make daily TELEEC reports to M+Ship on how the "X-rated" scenario for "One World Government" was going on. This particular assignment was for the financial-economic scenario. The big crash came in Autumn-Winter 1988 after the California Earthquake triggered by the stupid Government Nevada atomic "tests" (actually to make nuclear waste dumps underground.)

This crash "levelled" the US with other countries in the world, (Russia had "glasnosted" her way up to the same level), and all was ready for the WW III Middle East War scenario, which ended with the "accidental" firing of an H-bomb from a Polaris Submarine off the Straits of Gibraltar into the War Zone in the Israel-Middle East area.

Kennedy had ordered the Submarine Commander to fire it by a secret order. The Commander died mysteriously before he could arrive to Washington for his Court-Martial. No record of the order was found.

The TV pictures of the death destruction gave the needed public impact for Kennedy's proposal for One-World Police State Government. (He was by that time, the

President of the FCC, and
his name was Anthony
~~Carlisle~~. ~~Carlsile~~ Carlisle.

There were arguments, of
course, but the surprise
contact from the Markabian
soon resolved that. It
was then that the scenario
of "overkill" stocks of
Nuclear Weapons revealed
its true purpose. The
Markabians took them
"safely" off the planet and
never instructed them

to plant these devices
on major planets around
Central, so that he could
"terrorist-threat" his way
to a position on the GC.

This plan has been
stopped in TTA by the
exile of Xenu. However,
the LTA dramatization
will run (especially in
America) until it can't
go any further because
of no agreement or by

- 9 -

application of OT Levels
Tech & Admin. Actually
we are using a combination
of both to put the brakes
on the LTA dramatization.
